GST Returns Bulk Downloader v2.5.4

Step-by-step screenshots of one run (FY 2024-25, Q1: GSTR-1, GSTR-3B, GSTR-2B)

Captured from a test run on made-up demo data (username demo_user). The GST portal was replaced by a simple test copy, so no real login, client or GSTIN appears. Every screen shown is the real extension and real Chrome pages.

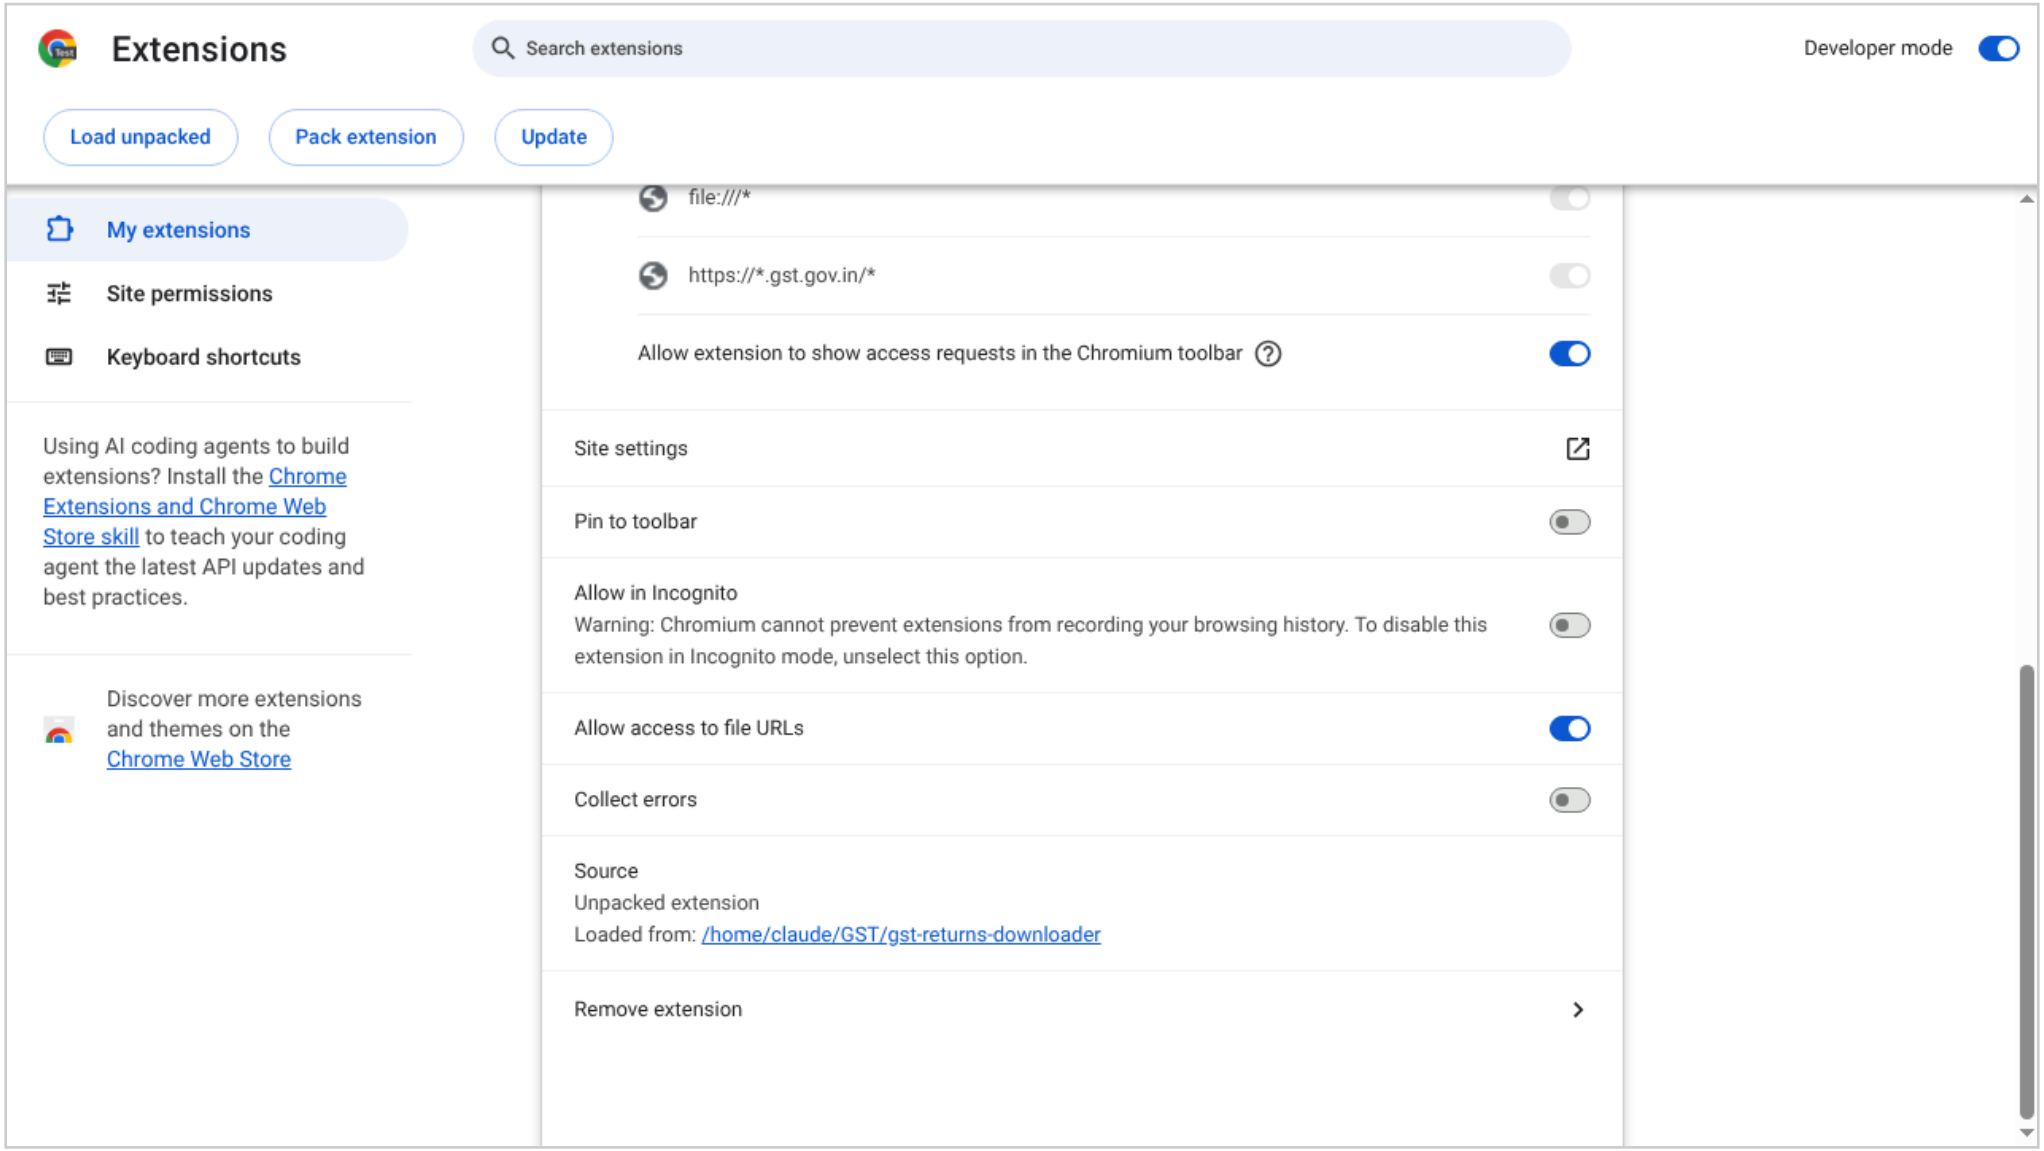

1. Install the extension

Open chrome://extensions, turn on Developer mode, click Load unpacked and choose the gst-returns-downloader folder. The extension appears as GST Returns Bulk Downloader 2.5.4.

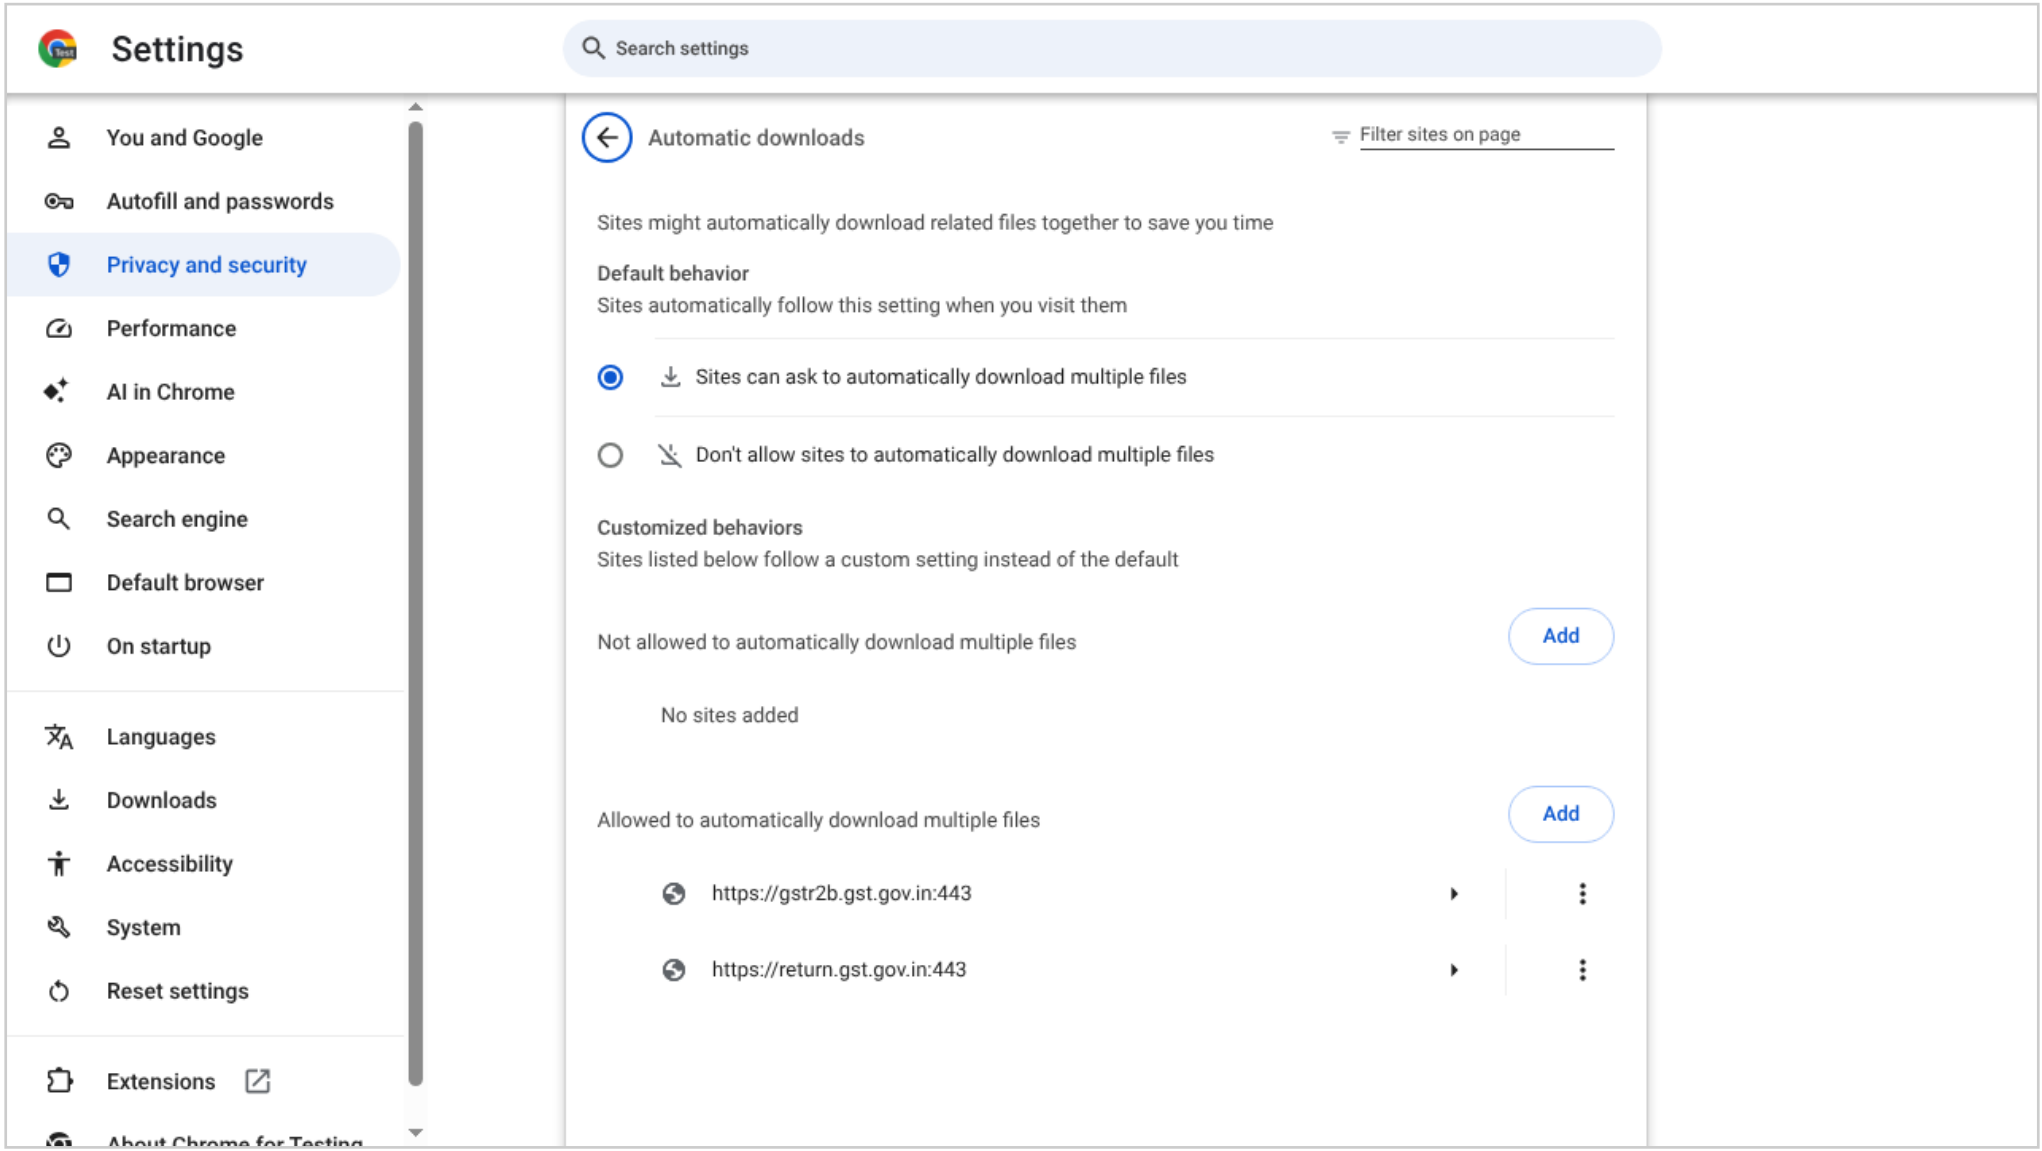

2. Allow access to file URLs

Click Details on the extension and turn on 'Allow access to file URLs'. This lets the extension read the saved files when it builds the ZIP.

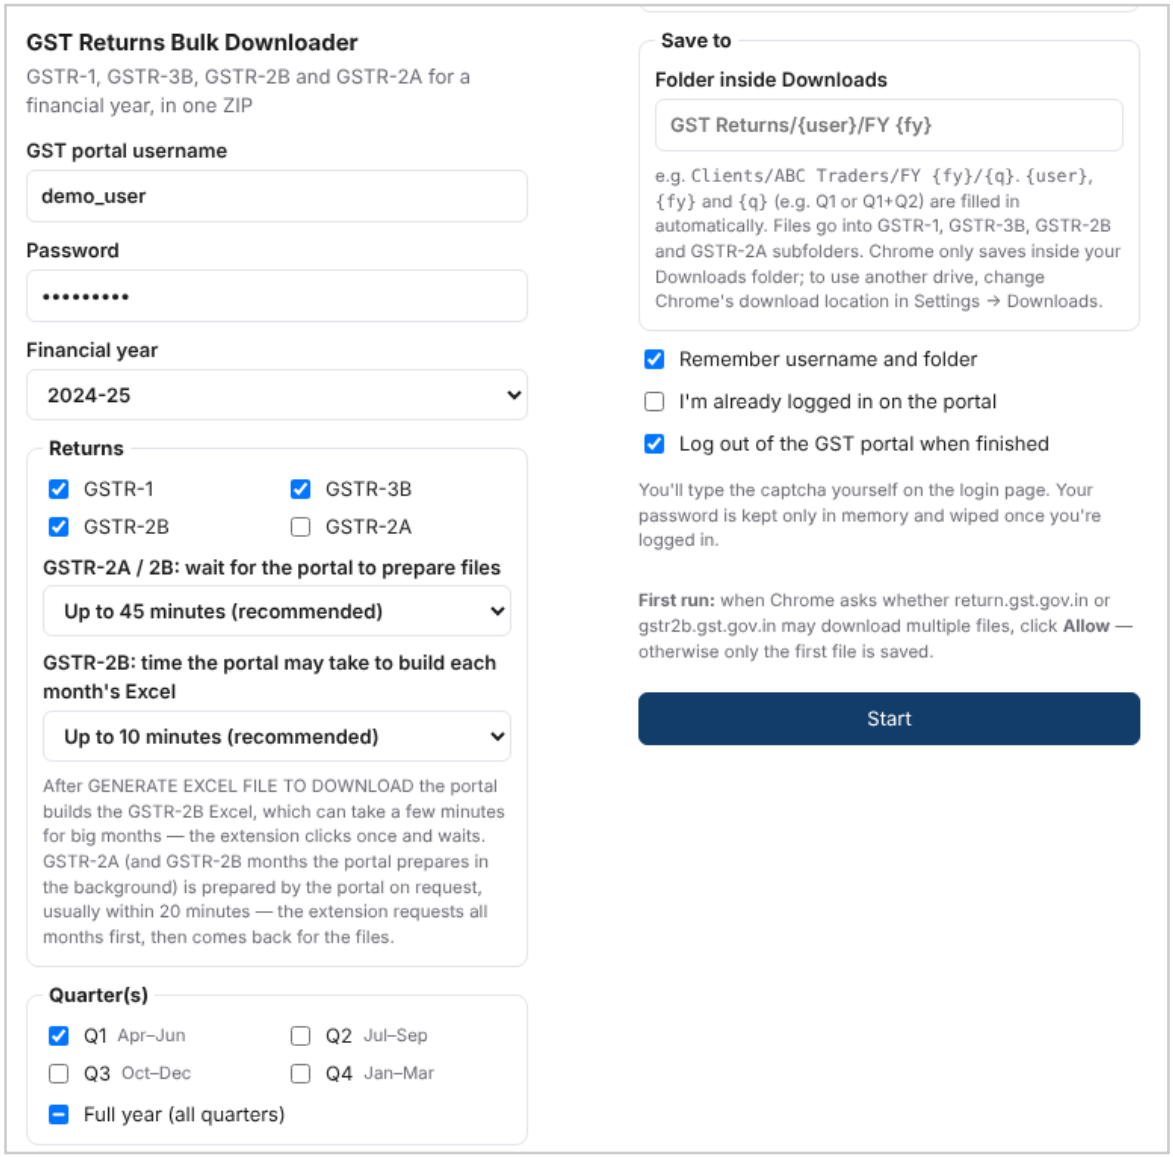

3. Allow automatic downloads (one time)

In chrome://settings/content/automaticDownloads, add return.gst.gov.in and gstr2b.gst.gov.in under 'Allowed to automatically download multiple files'.

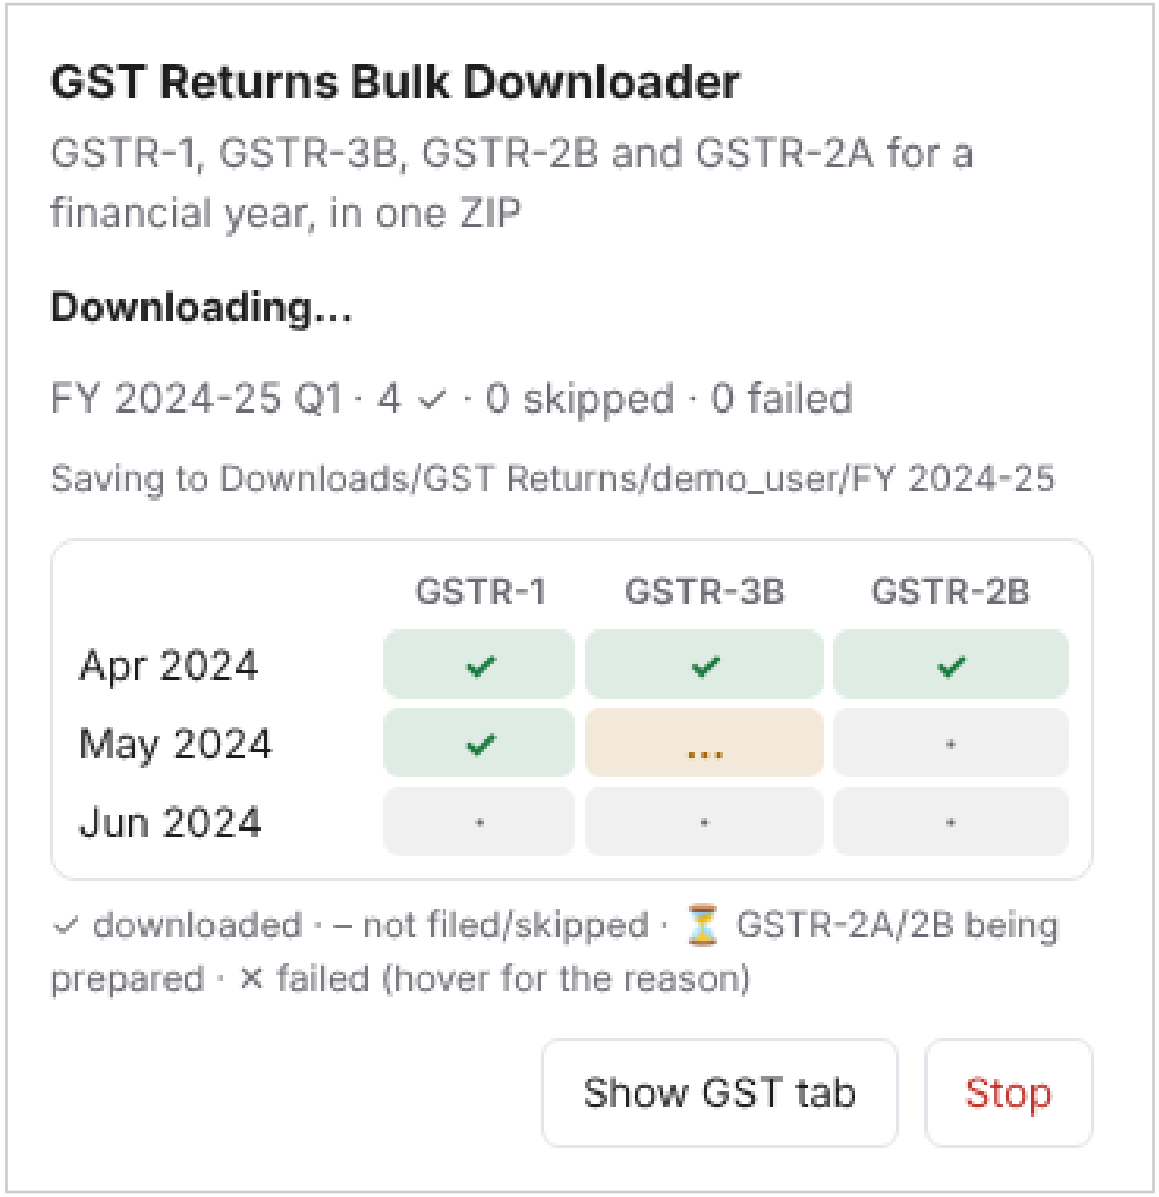

4. Fill the settings and click Start

Enter the portal username and password, choose the financial year, tick the returns (GSTR-1, GSTR-3B, GSTR-2B) and the quarters. Click Start. The GST login page opens; you type the captcha yourself, and the extension takes over after login.

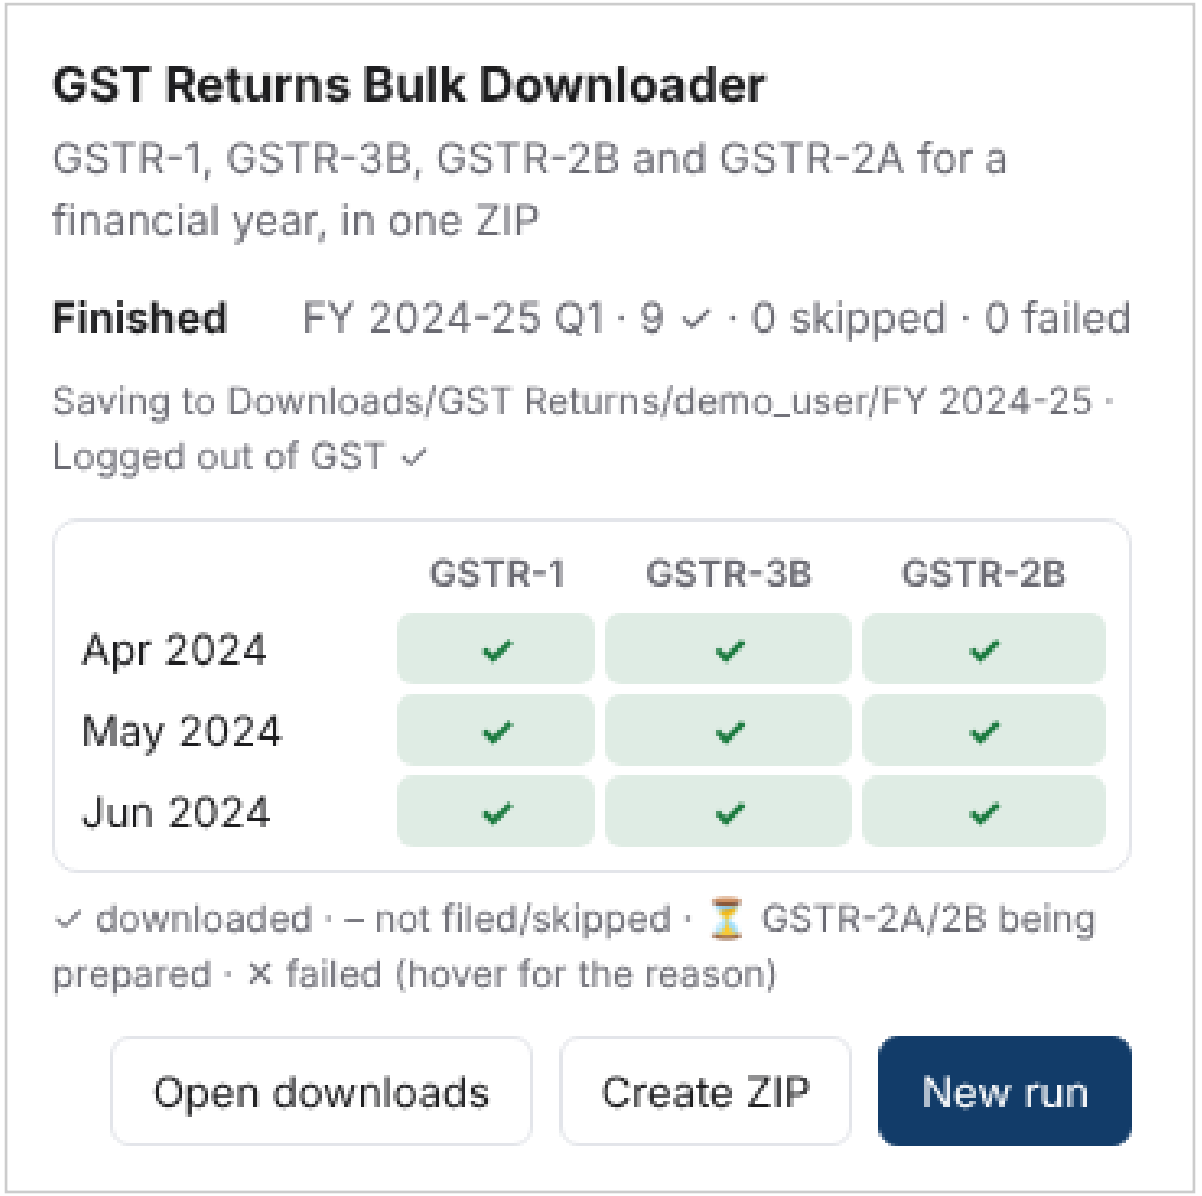

5. The extension downloads month by month

The grid fills in as each return is saved. A tick means downloaded; the dots show the return being fetched now. Leave the GST tab alone while it runs.

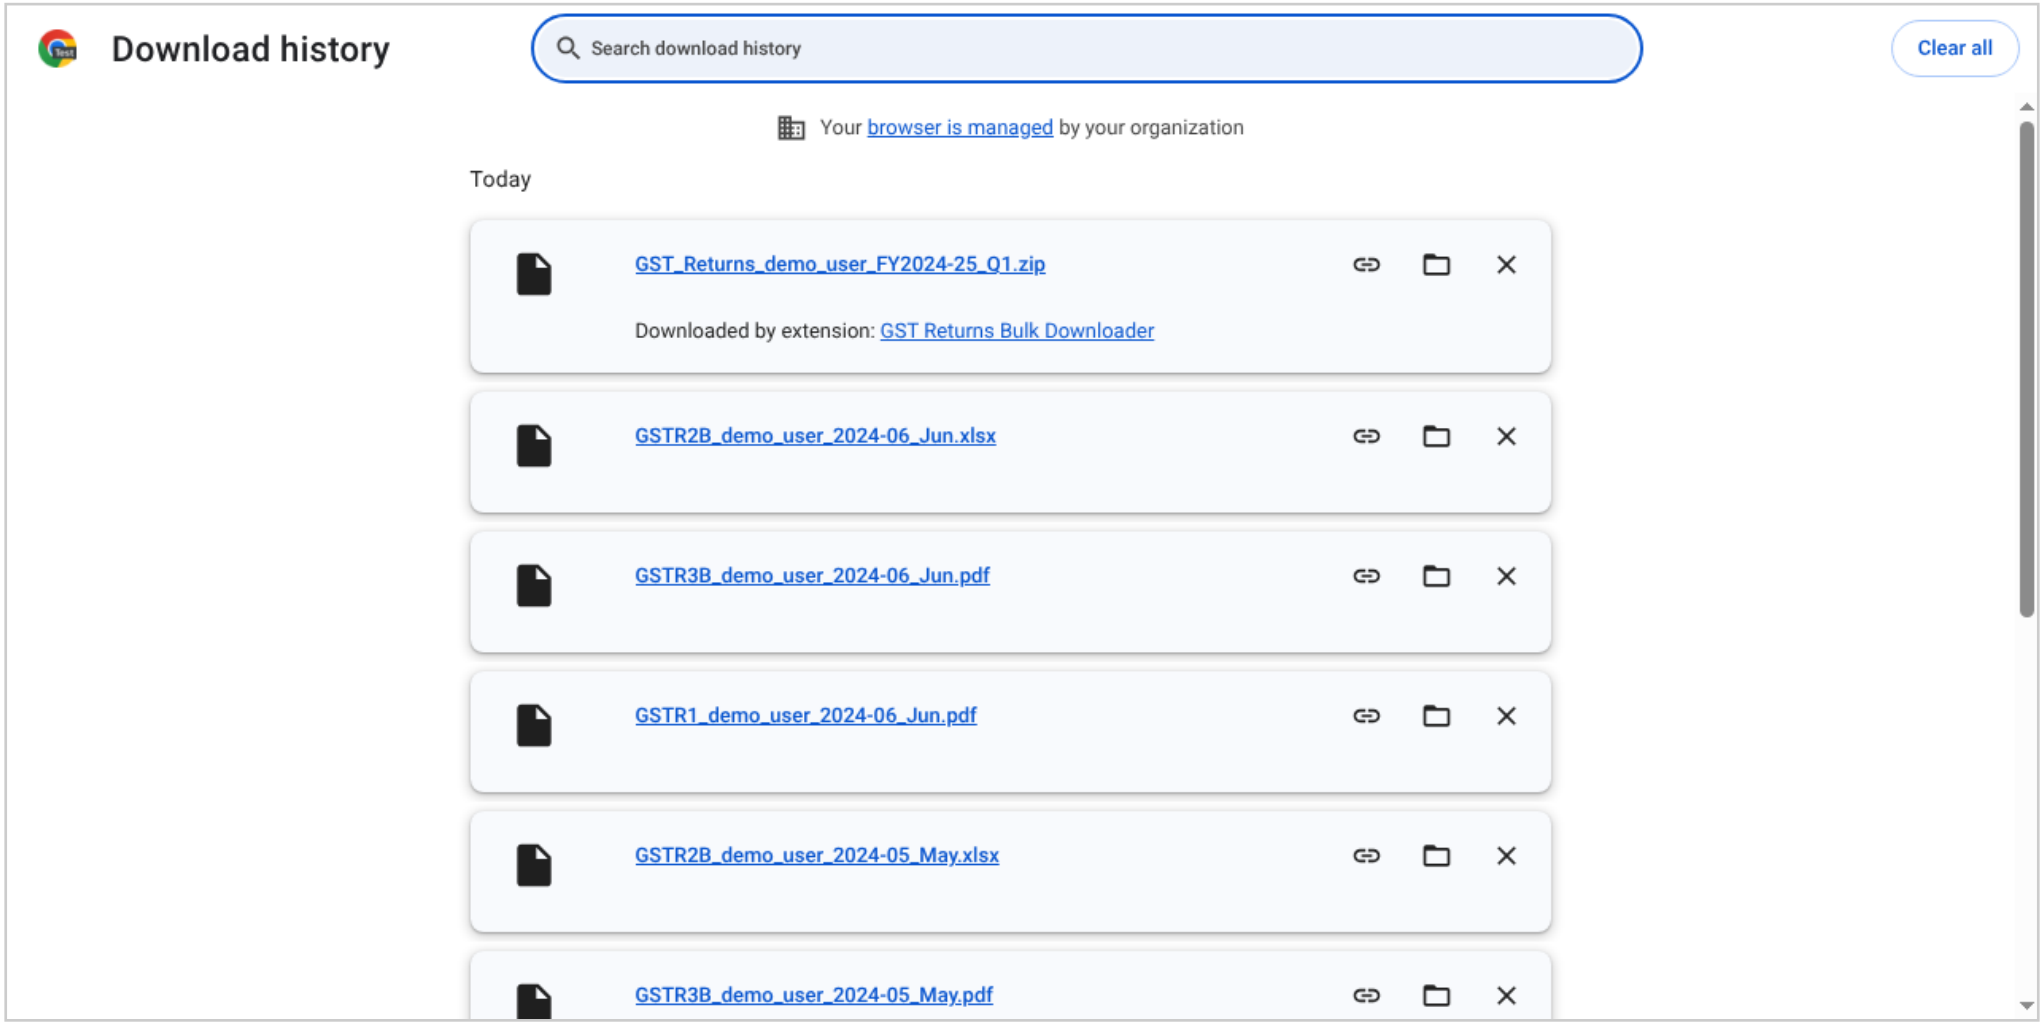

6. Finished

All 9 returns for Q1 downloaded, 0 failed, and the extension logged out of the portal. Click Create ZIP to bundle the files.

7. Files saved, neatly named

Each file is renamed by return and month and saved in Downloads/GST Returns/<user>/FY 2024-25, in GSTR-1, GSTR-3B and GSTR-2B folders. Files already there are skipped next time.

8. ZIP ready for the reconciliation page

The ZIP of all returns is saved in the same folder. Drop this ZIP into GST_Reconciliation.html (step 1) to continue.
